1. Introduction

Intelliden is a smart home ecosystem that allows users to control and monitor their living space across three devices: a Mobile/Tablet app, an AR Headset interface, and a Smartwatch app. Each interface is designed for a different context of use and level of interaction depth.

Prototype links:

- Mobile / Tablet: https://alive-lab-65083867.figma.site
- AR Headset: https://solo-said-49234940.figma.site
- Smartwatch: https://stood-hand-30126735.figma.site

Target users:

- Sebastian Popa — Power user, admin of the smart home system (Primary)
- Sara Guzell — Casual roommate, quick actions on the go (Secondary)
- Rotaru Razvan — Spatial explorer, AR-first interaction (Supplemental)

---

2. Mobile / Tablet App

Designed for: Sebastian Popa (Primary Persona) **Context:** Full control, automation management, detailed statistics

Screens

Dashboard The main screen shows an overview of all active devices, current home status, energy consumption, and active automations. Users can see at a glance which devices are on, the current temperature, and any active alerts.

Device Control A detailed control screen for individual devices. For the thermostat, it shows the current temperature prominently with slider or plus/minus controls to adjust it, a status label such as "Heating On", and usage statistics.

Automations and Gestures A screen for managing automation flows and gesture-based controls. Automation cards show rules like "Turn off all lights at 11 PM" or "Open blinds at sunrise". A gesture section shows available actions — pinch, tap, swipe — with short descriptions of what each controls.

Menu Main navigation screen with clearly labeled options: Devices, Statistics, Automations, Co-op, Settings. On mobile, a bottom navigation bar is used. On tablet, a more spacious sidebar layout is available.

Notifications A notification panel showing smart home alerts such as motion detection events. Each alert includes a warning icon, timestamp, and action buttons such as "Dismiss" and "View Camera".

How to Navigate

- Use the bottom navigation bar to switch between Dashboard, Devices, Automations, and Settings.
- Tap any device card to open its detail view.
- In Automations, tap the "+" button to create a new automation flow.
- Swipe left on a notification to dismiss it.

---

3. AR Headset Interface

Designed for: Rotaru Razvan (Supplemental Persona) **Context:** Spatial, hands-free interaction with physical devices

Screens

Home AR View The default view when the AR headset is active. The user sees their real environment with floating device indicator panels anchored to physical objects. Each indicator shows the device name and current status (e.g., "Thermostat — 22°C", "Front Door — LOCKED"). Tapping an indicator opens the device overlay.

Device Overlay A detailed floating panel appears anchored next to the selected physical device. For the thermostat, this shows the current temperature, up/down adjustment buttons, and mode selection (Cool / Heat / Fan). The panel is semi-transparent so the user can still see the room behind it.

Gesture Control A reference screen showing all available hand gestures:

- Pinch: toggle a device on/off
- Swipe: adjust a slider value (brightness, volume, temperature)
- Spread: expand a floating overlay panel
- Pinch close: dismiss the active overlay

AR Menu The main navigation menu, opened via a hand gesture. Contains four sections: Devices (full device list), Automations (active flows), Co-op (roommate activity and shared controls), and Settings (gesture sensitivity, overlay opacity, notification preferences).

Notifications A floating panel listing recent alerts — motion detection, thermostat adjustments, door lock confirmations, and device offline warnings. Each notification can be dismissed with a tap or swipe gesture.

How to Navigate

- Look at any smart device to trigger its floating indicator.
- Tap an indicator to open the full device overlay.
- Open the AR Menu by using the designated hand gesture (palm facing up, then close fist).
- Use back buttons or gestures to return to the Home AR View.

---

4. Smartwatch App

Designed for: Sara Guzell (Secondary Persona) **Context:** Quick glances, one-tap actions, urgent notifications

Screens

Home Dashboard A compact home screen showing the title "Intelliden", current time, and quick smart home status. Includes 3-4 key device shortcuts — Lights, Thermostat, Lock, Camera — displayed as rounded icon cards, and a small home status summary such as "3 devices active" or "All secure".

Thermostat Control Shows the current temperature in large text with plus/minus buttons to adjust the target temperature. Includes a status label such as "Heating On" and an easy back button.

Quick Actions / Gesture Control A screen for quick controls and gesture-triggered automations. Shows visual indicators for gestures such as pinch or swipe, with example automations like "Pinch to turn off all lights" or "Swipe to open blinds".

Menu A compact list screen with clearly labeled options: Devices, Automations, Co-op, Settings. Uses clean list layout with icons, optimized for small screen interaction.

Notification Alert A notification panel showing urgent alerts such as "Motion detected at

Front Door". Includes a warning icon, timestamp, and two compact action buttons: "Dismiss" and "View".

How to Navigate

- Crown or swipe up/down to scroll between screens.
- Tap the large action button on the main screen for the quickest interaction.
- From the Menu, tap any category to see its controls.
- Swipe right to go back to the previous screen.

---

5. Statement of AI Use

The following AI tools were used during the development of this project. All generated content was reviewed, verified, and manually adjusted before being included in the final deliverables. AI was used as an assistant, not as a copy-paste source.

Vlad — Mobile / Tablet App & Research

Claude (claude.ai) Used for: supporting the research phase, including literature review structuring and competitor analysis between existing smart home ecosystems (Apple HomeKit, Google Home, Home Assistant). All research insights were cross-checked against official documentation and real-world product behavior before being used in the project.

Figma AI Used for: generating the initial Mobile/Tablet interface layout. Sample prompt: "*Create a mobile/tablet interface for a smart home app called Intelliden. Use a dark background (#0F172A), primary color green (#00C896), and the Inter font. The design should feel modern, minimal, futuristic, and user-friendly. I need 5 screens: Home Dashboard, Device Control, Automations and Gestures, Navigation Menu, Notification Alert.*" The generated layout was reviewed and adjusted to match the team's style guide and the project's interaction requirements.

Gabi — AR Headset Interface & Personas

Claude (claude.ai) Used for: project planning, generating initial drafts for persona profiles (Sara Guzell and Rotaru Razvan), structuring the GitHub repository, and defining content for AR storyboard, user flow, sitemap, sketches, and prototype screens. Conversation link: https://claude.ai/share/e9391e0f-103c-40ac-a6e1-d7508893194c Sample prompt: "*Create two persona profiles for a smart home AR app. Persona 2: Sara Guzell, casual roommate, smartwatch user. Persona 3: Rotaru Razvan, design student, AR glasses user.*" All generated content was manually reviewed and adjusted — persona details were cross-checked for realism, storyboard scenes were simplified to match the actual tool used (v0, hcai

realism, storyboard scenes were simplified to match the actual tool used (v0-real-story.vercel.app), and prototype screens were refined to match the team's style guide.

Gemini Used for: initial ideation for Persona 1 (Sebastian Popa) and early project structure suggestions. Sample prompt: "*Generate a persona for a 29-year-old software developer who is the admin of a smart home system.*" The output was reviewed and significantly edited — name, demographics, and scenario were customized to fit the Intelliden context.

Figma AI Used for: generating the initial AR Headset interface layout. Sample prompt: "*Create an AR headset interface for a smart home app called Intelliden. Dark background (#0F172A), primary color green (#00C896), font Inter. 5 screens: Home AR View, Device Overlay, Gesture Control, AR Menu, Notification Panel.*" The generated layout was reviewed and adjusted to match the team's style guide and the interaction flows defined in the sketches and user flow diagrams.

Cosmin — Smartwatch App & Style Guide

Claude (claude.ai) Used for: supporting the style guide creation, including color palette decisions, typography choices, and icon style selection. Also used for brainstorming Smartwatch screen structure and defining the visual constraints for small screen interfaces. All suggestions were cross-checked against Apple Human Interface Guidelines for watchOS and adjusted to fit the Intelliden design direction.

Figma AI Used for: generating the initial Smartwatch interface layout. Sample prompt: "*Create a smartwatch interface for a smart home app called Intelliden. Use a dark background (#0F172A), primary color green (#00C896), and the Inter font. The design should feel modern, minimal, futuristic, and highly readable on a small smartwatch screen. I need 5 screens: Home Dashboard, Thermostat Control, Quick Action / Gesture Control, Smartwatch Menu, Notification Alert.*" The generated layout was reviewed and adjusted to match the team's style guide and optimized for small screen readability and interaction.

Radu — User Guide & Video Walkthrough

No AI tools were used for the video walkthrough or the writing of this user guide. All content was written manually based on the team's prototypes and deliverables
